ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a solvent adhesive capable of exhibiting a sufficient adhesive strength when nylon resin molded products are mutually bonded.

SOLUTION: This adhesive for the nylon resin molded products comprises a solvent and a copolymer nylon. Specifically, the adhesive comprises 0.5-20 wt.% of the copolymer nylon containing 1/2 kinds of units derived from a 6-12C lactam, a 6-12C aminocarboxylic acid and a combination of a 3-22C dicarboxylic acid with a 2-20C diamine and the solvent containing at least one kind of component of a phenolic compound and a fluoroalcohol compound.
